The Handbook consists of three volumes. Volume II focuses on feed sources. Reflector antennas are extraordinary devices that combine high gain with geometrical simplicity, and can operate in broad frequency bands. Their performance, however, depends on the electrical characteristics of the feed system with which they operate.

Reinaldo Perez, in Wireless Communications Design Handbook, 1998. 7.4.3 THE REFLECTOR ANTENNA. The reflector antenna is the most popular in spacecraft antenna systems because of its structural simplicity and light weight. It is also a matured design. The main disadvantage is that the reflector needs to be offset to avoid blockage of the feed point.
