A missile flight simulation is a computational tool that calculates the flight of a missile from launch until it engages the target. The simulation is based on mathematical models of the missile, target and environment. This book provides instruction for the preparation of these mathematical models to simulate the flight of a surface-to-air missile.

The size of the defended area and the capabilities of the threat have great influence on the speed, maneuverability, and lethality requirements of the missile system. Simulation of the missile flight path can provide valuable information about these requirement Surface-to-air missiles are designed to defend a land area against an aerial or theater ballistic missile threat.

I recently acquired a copy of "Missile Flight Simulation" by Dr. Jeffrey Strickland. I have worked in missile defense and tactical missile seeker system engineering for more than 20 years and I find this to be one of the more useful items in my missile flight dynamics library, after Zarchan's priceless "Tactical and Strategic Missile Guidance."
